

29th March, 1965.

H. Paterson Esq.,  
University College of Rhodesia and Nyasaland,  
Zoology Department,  
Private Bag 167 H,  
SALISBURY,  
Southern Rhodesia.

Dear Mr. Paterson,

I am afraid the enclosed article took longer than I anticipated and I would, therefore, ask you if you could send your comments and proposed alterations as soon as possible. The article is supposed to be in Geneva by the end of March!

I have indicated on the attached list of figures their origins for you to refer to in volume 43 of the Rivista. To be in line with the other morphological data could you possibly indicate the 95% confidence interval for the mean egg length measurement given for species C from Balagene on page 8?

I have guessed at your title, which WHO insist on.

Yours sincerely,

G. Davidson  
Reader in Entomology  
as applied to Malaria.
