SALISBURY,

Southern Rhodesia.

17th July 1965.

Dear Mr. Davidson,

Thank you for the locality list. I have corrected and added to the one copy which I enclose with this letter.

None of the records is of much interest but they help to fill in gaps I suppose.

My colony (should be in inverted commas!) of suspected species C should start laying the third generation any day now. When I get a reasonable batch I shall simply post it off without further warning. I am afraid you will have to nurse madly again as there are not ~~likely~~ likely to be many eggs. We must hope it is species C.

I have also got two colonies going from egg batches of individual wild caught females. I have not yet identified them but this has now been set in motion. Would you care to have subcultures? They are from Chirundu.

Best wishes,

Yours sincerely
