Private Bag 167 H,

SALISBURY,

Southern Rhodesia.

20th Feb. 1965.

Dear Mr. Davidson,

I have enclosed some data which may be worth incorporating in your chapter on A. gambiae complex for WHO. I have also sent some photographs which may be of interest to you even if you do not wish to publish them.

You may wish to publish a new record of sp. C: Tinonganine, Mocambique. It is of some interest as this is the first record of it coexisting with A. merus. It was caught together with A. merus in a cow-baited net by Clarke.

Please let me know if I can send any other information which might be of interest. I haven't worried about the cytology as Garnet seems to be well ahead of me in this field.

With best wishes,

yours sincerely,

Hugh Paterson.

I don't remember whether I sent you the MS which will appear in *Revisita di Malariologia* - anyway here is a copy. HEP.
